

HOW TO DETERMINE YOUR RING SIZE

IT'S AS SIMPLE AS THAT:

Print this pdf without scaling in DIN A4 format. Place a ruler on the measuring bar and compare the size. The beam should be exactly 10cm long.

Take your favourite ring and place it on the template so that the line inside the ring is visible. Remember that the rings can vary in size depending on their width.

Rings with a width of 8mm or more can usually be bought one or two sizes larger. For narrow rings under 1.2mm please order one size smaller.
